# Automation Anywhere Advantages

Automation Anywhere is the Best RPA Solution. Check out how Automation Anywhere Compares to Blue Prism®.

Robotic Process Automation
Q1 2017 Forrester Wave™

Source: The Forrester Wave™: Robotic Process Automation, Q1 2017 Forrester report

Quicker Bot Creation
Create bots significantly more quickly than with Blue Prism by using built-in screen recorders to capture keystrokes and mouse-clicks. Once capturing the core transactions, details are added by switching over to the easy-to-use drag-and-drop wizards.

Complete Bot Control
Within the unique web-based Control Room, users can view tasks in progress, schedule bots, manage bot versions, administer users and roles and maintain an audit trail. Scalable architecture can handle growth in scale.

Unmatched Security
Unlike Blue Prism, bot files are encrypted. Also, a segregation of duties exists between the bot repository and bot runner. Also, AA uniquely offers secure recording functionality - - customer sensitive data is never stored.

IBM BPM Express is Included
Orchestrate your Automation Anywhere digital workforce with the industry-leading IBM Business Process Management Express.

Comprehensive Disaster Recovery
Provides comprehensive HA/DR functionality, not just at the server level (Blue Prism), but at a bot runner level. If a machine goes down, AA will trigger the backup bot runner automatically.
